

TOPTHERM CLEAN F 9 B

CLEANING PRODUCT FOR COMBUSTION CHAMBERS IN CONDENSING BOILERS

Description

TOPTHERM F 9 B is an acid product, with specific inhibitors and a dispersant agent for metal oxides in combustion chambers made of aluminium-silicon in condensing boilers, or wherever it could be useful and compatible.

How to use

The product should be used only after the application of TOPTHERM F 9 A and after the rinsing operation. Spray the product to the incrustated surfaces until they are completely wet and let it react from 2 to 5 minutes. After the reaction period, thoroughly rinse the combustion chamber.

For safety reason, never use **CLEAN F9 B** with pressurisable sprayers. After every cleaning operation check, that the condensation discharge outlet is not blocked by residues of dirt removed from the exchanger.

Physical and chemical properties:

Aspect: yellow liquid
pH: about 1

Environmental and safety information

For more details about a safe manipulation and storage of the product, refer to TOPTHERM CLEAN F 9 B MSDS.

Available package

1 kg bottles – 10 kg cans
